Professional Summary

Software Engineer with 1+ years of experience in Python backend development, specializing in building scalable backend applications and 100+ RESTful APIs. Proficient in Python, Sanic, FastAPI, SQLAlchemy, PostgreSQL, MySQL, AWS S3, and Git, with hands-on experience in API development, database optimization, debugging, and Agile software development. Currently working as an Executive – Technical Support while seeking to contribute as a Python Backend Developer.

Technical Skills

Programming Languages: Python

Backend Development: Python, Sanic, FastAPI, REST API Development, SQLAlchemy, API Integration

Database & Data Handling: SQL, PostgreSQL, MySQL

Cloud & Storage: AWS S3

Testing: API Testing, Postman, Manual Testing, Debugging

Software Engineering Concepts: Object-Oriented Programming (OOP), Modular Architecture, Service Layer Pattern, Agile Development

Version Control & Tools: Git, GitHub, JIRA, Postman, GitHub Copilot

Frontend Technologies: React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux Toolkit

Experience

Software Engineer

Feb 2025 – Mar 2026

Atom Build (Anant Atom Consultancy Private Limited)

- * Developed and maintained 100+ RESTful APIs using Python (Sanic) for production backend applications.
- * Optimized PostgreSQL queries and backend workflows to improve data retrieval efficiency.
- * Integrated AWS S3 with backend services for secure file storage and management.
- * Investigated and resolved production issues through debugging and root cause analysis.
- * Collaborated with frontend developers to integrate React-based applications with backend APIs.
- * Validated REST APIs using Postman to ensure functionality and reliability before deployment.

Executive – Technical Support (NAPS)

June 2026 – Present

Bluspring Enterprises Limited

- Troubleshoot Windows systems, enterprise applications, printers, and hardware/software issues while maintaining SLA targets.
- Perform software installation, system configuration, user account management, and incident documentation using standard support procedures.
- Collaborate with cross-functional teams to diagnose technical issues, ensuring timely resolution and improved end-user experience.

Projects

Atom Hub – Data Platform & Job Orchestration System | Python, Sanic, PostgreSQL, React, JavaScript

[Live Project](#)

- Developed and maintained 100+ RESTful APIs using Python (Sanic) to support job orchestration and data processing workflows.
- Optimized PostgreSQL queries for efficient data retrieval, validation, and processing from multiple data sources.
- Investigated and resolved API and data-related production issues through debugging and root cause analysis, improving system stability.
- Implemented data validation and handled edge cases to ensure workflow reliability and data integrity.
- Collaborated with frontend developers to seamlessly integrate React.js applications with backend APIs for efficient data exchange.
- Performed API testing using Postman to validate endpoints, request-response flow, and application reliability.

Education

BABU BANARASI DAS UNIVERSITY

2020 – 2024

Bachelor of Technology in Computer Science

Lucknow, Uttar Pradesh

Percentage: 85.35%
